## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

- a. Claims 1-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (U.S. Patent 5,422,806) in view of Murase et al. (U.S. Patent 4,289,272).

Chen discloses an integrated circuit, microprocessor and method of having storage location for temperature limit and accessible by instruction execute by the IC, compare logic to compare temperature limit value (col. 1-2, lines 65-50, fig. 1-6), temperature control using different limit value for safe operation of the CPU (abstract and figure, fig. 1-6, col. 6, lines 32-62), the storage is addressable access (col. 32-62), a direct control of the cooling device (abstract fig), upper limit and lower limit value, instruction to control the device (abstract fig), signal can be asserted and deasserted (abstract), control using software (fig. 6, col. 6, lines 32-63).

Chen does not disclose a temperature sensor, Du discloses such sensor to have an improved strategy for a thermo management control device (col. 5, lines 39-46, fig. 1-4, col. 2, lines 40-43).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Chen to have a temperature sensor taught by Du in order to have an improved strategy for a thermo management control device.

Chen does not disclose the output of the second control signal, but it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Chen to have the output of the second control signal in order to have more flexibility such as indication of abnormal condition.
